SOFT SKILLS

Eager to learn Motivated Ambitious
Perseverance Social Enthusiastic
Sporty Detail Oriented

SKILLS

LANGUAGES

Dutch: **Native**
English: **Fluent**
French: **Proficient**
German: **Beginner**

CERTIFICATIONS

Spring Certified Professional: (2025)

EXPERIENCES

Software Developer | Volvo Cars Belgium (via Axxes)

📅 May 2024 – Present 📍 Ghent, Belgium

- Part of the Developer Experience Team: built shared Java/Spring & Angular tools, managed Kafka, DevOps pipelines and bash scripting across the organisation.
- Led the Keycloak Integration Tool from requirements gathering through architecture and full-stack delivery, streamlining authorization management across all Volvo plants.
- Sole architect and developer of a production hexagonal-architecture microservice bridging Maximo WMS and S4M vending machines via bidirectional Kafka event streaming.

Solution Developer | Silverfin (via Axxes)

📅 Feb 2024 – May 2024 📍 Ghent, Belgium

- Developed Personal Income Tax templates in Silverfin's Liquid variant within a team of 17 professionals.
- Delivered under tight deadline; contributed to code reviews and quality assurance.

R&D Student | PSI Control (Picanol Group)

📅 Jul 2022 – Sep 2022 📍 Ypres, Belgium

- Designed a portable adjustable USB-C power supply using Arduino (C++) with layered C# WPF GUI, applying SOLID principles throughout.

PROFILE

I'm a software engineer with a strong preference for backend development, drawn to the architecture, logic, and precision that goes into building robust systems. Through my work at Volvo Cars on supply chain software with the DEVEX team, I've developed an appreciation for clean, well-structured code and scalable solutions. My analytical mindset and drive for structured problem-solving are constants, whether I'm designing a service, debugging a pipeline, exploring a new technology, or looking for ways to improve how a team works. During my studies I also reached the finals of the CyberSecurity Challenge Belgium, further sharpening these instincts.

I continuously invest in broadening my technical knowledge through certifications and personal projects.

PSM I: [Scrum Master I \(2025\)](#)

OCP Java SE17: [Oracle Certified Professional \(2024\)](#)

VARIA

CYBER SECURITY CHALLENGE BELGIUM: [Finalist of the Cyber Security Challenge 2023](#)

EDUCATION

2013–2019: [Sint-Aloysiuscollege Menen, Sciences Math](#)

2019–2023: [Ind. Engineering ICT KU Leuven, Ghent](#)

2023: [Axxes Traineeship Spring, Kafka, Docker, AWS](#)

2018 / 2023–24: [Badminton: Initiator & Trainer B](#)

Outside of work, I enjoy getting my hands dirty with Linux systems, self-hosted servers, and personal infrastructure, finding useful and fun ways to enhance my home or workflows. Setting up dashboards, writing scripts, building out my homelab, exploring tools for cleaner development environments... there's a particular satisfaction in making a system work exactly the way you want it to.

Sport is a big part of my life. I play badminton at a Flemish competitive level, ranked as high as 60th in Belgium and finishing in the top 16 at this year's Belgian Championships, and hold a Trainer B diploma. I coach three individual top players, assist the West-Flemish talent team Open Elite, and lead weekly group sessions at De Pluimplukkers, the largest badminton club in Belgium. I also keep active through running, swimming, and calisthenics, and have completed a few half marathons along the way.

When I'm not training or coaching, I like to unwind with a good fantasy novel, a movie, or a series. You'll also find me hunting for a great coffee, planning where to travel next, or tinkering with something on a server.

PROJECTS

Keycloak Integration Tool | [Volvo Cars Belgium](#)

📅 2024 – Present

- Full-stack tool (Java, Spring, Angular) for managing authorization across all Volvo plants.
 - Led solo from requirements gathering through architecture and delivery.
-

Maximo & S4M Microservice | [Volvo Cars Belgium](#)

📅 2024 – Present

- Hexagonal-architecture microservice bridging Maximo WMS and factory-floor vending machines via bidirectional Kafka streaming.
 - Became an internal reference for design patterns, test architecture, and observability.
-

Privacy Zone Attack Model | [KU Leuven Thesis](#)

📅 2022 – 2023

- Algorithm reconstructing GPS routes hidden by fitness app privacy zones, exposing home locations.
 - Published as a scientific article; individual project.
-

Port Simulation | [KU Leuven](#)

📅 2021 – 2022

- Full simulation model for a container port: deterministic crane scheduler, AI process planner, and statistical visualisation.
-

Homelab & Personal Linux Setup | [Personal](#)

📅 Ongoing

- Self-hosted server infrastructure with dashboards, automation scripts, and containerised services.
- Ongoing exploration of Linux, networking, and clean development environments.
