Eager to learn Motivated Ambitious
Perseverance Social Enthusiastic
Sporty Detail Oriented

SKILLS

LANGUAGES

Dutch: **Native**

English: **Fluent**

French: **Proficient**

PROFILE

I'm a software engineer with a strong preference for backend development, drawn to the architecture, logic, and precision that goes into building robust systems. Through my work at Volvo Cars on supply chain software with the DEVEX team, I've developed an appreciation for clean, well-structured code and scalable solutions. My analytical mindset and drive for structured problem-solving are constants, whether I'm designing a service, debugging a pipeline, exploring a new technology, or looking for ways to improve how a team works. I continuously invest in broadening my technical knowledge through certifications and personal projects.

Outside of work, I enjoy getting my hands dirty with Linux systems, self-hosted servers, and personal infrastructure, finding useful and fun ways to enhance my home or work-flows. Setting up dashboards, writing scripts, building out my homelab, exploring tools for cleaner development environments... there's a particular satisfaction in making a system work exactly the way you want it to.

Sport is a big part of my life. I play badminton at a Flemish competitive level, ranked as high as 60th in Belgium and finishing in the top 16 at this year's Belgian Championships, and hold a Trainer B diploma. I coach three individual top players, assist the WestFlemish talent team Open Elite, and lead weekly group sessions at De Pluimplukkers, the largest badminton club in Belgium. I also keep active through running, swimming, and calisthenics, and have completed a few half marathons along the way.

EXPERIENCES

Software Developer | **Volvo Cars Belgium** (via Axxes)

📅 May 2024 – Present (until Sep 2026) 📍 Ghent, Belgium

- Member of the Developer Experience (DEVEX) team, supporting shared tooling and developer workflows across all Volvo plants.
- Solely responsible for two production-grade systems delivered end-to-end (see Projects): the Keycloak Integration Tool and the Vending Machine Microservice.

Solution Developer | **Silverfin** (via Axxes)

📅 Feb 2024 – May 2024 📍 Ghent, Belgium

- Developed Personal Income Tax templates in Silverfin's Liquid variant within a team of 17 professionals.
- Delivered under tight deadline; contributed to code reviews and quality assurance.

Software Consultant | **Axxes**

📅 August 2023 – Present 📍 Antwerp, Belgium

- Employed as a software consultant, deployed on long-term assignments at client companies (Silverfin, Volvo Cars Belgium).

CERTIFICATIONS

Spring Certified Professional: [VMware \(2025\)](#)

Professional Scrum Master I: [Scrum.org \(2025\)](#)

Oracle Certified Professional: Java SE 17 Developer: [Oracle \(2024\)](#)

VARIA

CYBER SECURITY CHALLENGE BELGIUM: [Finalist of the Cyber Security Challenge 2023](#)

BADMINTON COACHING: [Initiator \(2018\)](#) & [Trainer B \(2023–24\)](#)

EDUCATION

2013–2019: [Sint-Aloysiuscollege Menen, Sciences Math](#)

2019–2023: [Ind. Engineering ICT KU Leuven, Ghent](#)

2023: [Axxes Traineeship Spring, Kafka, Docker, AWS](#)

R&D Student | [PSI Control \(Picanol Group\)](#)

 Jul 2022 – Sep 2022

 Ypres, Belgium

- Designed a portable adjustable USB-C power supply using Arduino (C++) with layered C# WPF GUI, applying SOLID principles throughout.

PROJECTS

Keycloak Integration Tool | [Volvo Cars Belgium](#)

 2024 – Present (until 2026)

- Full-stack authorization-management platform used to administer Keycloak across every Volvo plant; replaced manual configuration with a single self-service UI.
- Drove the work solo from requirements gathering through architecture decisions to delivery; designed a layered Spring backend and an Angular frontend with reusable role/permission abstractions.
- Backed by Oracle DB; deployed to OpenShift through GitHub Actions pipelines.

[Java](#) [Spring](#) [Angular](#) [Keycloak](#) [Oracle DB](#) [GitHub Actions](#)
[OpenShift](#)

Vending Machine Microservice | [Volvo Cars Belgium](#)

 2024 – Present (until 2026)

- Hexagonal-architecture microservice connecting Maximo (warehouse management) and S4M (factory-floor vending machines) through bidirectional Kafka event streams.
- Sole architect and developer; established the team’s reference patterns for ports/adapters, contract-driven test architecture, and observability.
- Containerised with Docker, persisted on Oracle DB, deployed to OpenShift via GitHub Pipelines.

[Java](#) [Spring](#) [Thymeleaf](#) [Kafka](#) [Docker](#) [Oracle DB](#) [GitHub Pipelines](#)
[OpenShift](#)

Privacy Zone Attack Model | [KU Leuven Thesis](#)

 2022 – 2023

- Algorithm reconstructing GPS routes hidden by fitness app privacy zones, exposing home locations.
- Published as a scientific article; individual project.

[Python](#) [NumPy](#) [Matplotlib](#) [GPS / Strava API](#) [LaTeX](#)

Port Simulation | [KU Leuven](#)

 2021 – 2022

- Full simulation model for a container port: deterministic crane scheduler, AI process planner, and statistical visualisation.

[Java](#) [Simulation](#) [AI Planning](#) [AI Heuristics](#) [JFreeChart](#) [JUnit](#)

Homelab & Personal Linux Setup | [Personal](#)

 Ongoing

- Self-hosted server infrastructure with dashboards, automation scripts, and containerised services.
- Ongoing exploration of Linux, networking, and clean development environments.
